WHAT IS CLAIMED IS:

- 1. In a data processing system, a method comprising the steps of:

 creating a migratable storage tree with a storage root key; and

 creating a non-migratable storage tree with the storage root key, wherein the

 migratable storage tree and the non-migratable storage tree are identically structured.
 - 2. The method as recited in claim 1, wherein the migratable storage tree and the non-migratable storage tree are created by a trusted computing module in accordance with Trusted Computing Platform Alliance.
 - 3. The method as recited in claim 1, wherein the migratable storage tree comprises migratable keys and a user key, wherein the non-migratable storage tree comprises non-migratable keys and a user key.
 - 4. The method as recited in claim 1, wherein the non-migratable storage tree will include non-migratable storage keys corresponding to each migratable storage key in the migratable storage tree.
 - 5. The method as recited in claim 1, wherein use authorization in the non-migratable storage tree will be identical to use authorization in the migratable storage tree.

RPS9-2000-0400

| 1 | 6. | The method as recited in claim 1, further comprising the steps of: |
|---|----|--|
| 2 | | requesting a migratable storage key, and |
| 3 | | requesting a non-migratable storage key. |
| 1 | 7. | The method as recited in claim 6, wherein the step of requesting a |

- 7. The method as recited in claim 6, wherein the step of requesting a migratable storage key will identify a parent key in the migratable storage tree, and wherein the step of requesting a non-migratable storage key will identify a parent key in the non-migratable storage tree that corresponds to the parent key in the migratable storage tree.
- 8. The method as recited in claim 1, further comprising the step of:
 when a key loading request is made for a migratable storage key, loading a key
 from the non-migratable storage tree instead of loading a corresponding key from the
 migratable storage tree.

| 9. | In a data processing system, a method comprising the steps of: | | |
|-------|--|--|--|
| | splitting a request to create a new migratable storage | | |
| key w | ith given authentication data and a first parent key into first and second | | |
| comm | ands; | | |

wherein the first command creates a migratable storage key with the given authentication data and the first parent key; and

wherein the second command requests creating a non-migratable storage key with the given authentication data and a second parent key which is determined from looking up a key that corresponds to the first parent key in a database.

- 10. The method recited in claim 9, wherein the migratable storage key and the non-migratable storage key are associated in a database.
- 11. The method recited in claim 9, wherein the non-migratable key is a multiprime key.
- 12. The method recited in claim 9, where the non-migratable key is an elliptic curve key.

| 1 | 13. | The method as recited in claim 9, further comprising the steps of: | | |
|---|--|--|--|--|
| 2 | | creating a new migratable signing key with the given authentication data and a | | |
| 3 | third p | third parent key; | | |
| 4 | | storing the new migratable signing key with the given authentication data and | | |
| 5 | the th | ird parent key; | | |
| 6 | | storing the new migratable signing key with the given authentication data and | | |
| 6 7 | a four | th parent key where the fourth parent key is a non-migratable key associated | | |
| 8 mm 1 mm | with the third parent key in a database. | | | |
| .1 | | | | |
| 1 | 14. | The method as recited in claim 13, further comprising the steps of: | | |
| 2 | | requesting a signature by the new migratable signing key; | | |
| 3 | | searching the database for the location of a key blob containing the new | | |
| 3 | migrat | table signing key; | | |
| 5 | | loading a copy of the new migratable signing key stored in the key blob | | |
| 6 | create | ed with the non-migratable parent key; and | | |
| 7 | | signing with the new migratable signing key. | | |
| | | | | |
| 1 | 15. | The method as recited in claim 9, further comprising the steps of: | | |
| 2 | | creating a new data stored by means of the first parent key; | | |
| 3 | | storing the new data with the first parent key; | | |
| 4 | | storing the new data with the second parent key where the second parent key is | | |
| 5 | a non- | migratable key associated with the third parent key in a database | | |

| 16. | The method as recited in claim 15, further comprising the steps of: | | |
|-------------------------|---|--|--|
| | requesting data stored by the new migratable storage key; | | |
| | searching the database for the location of a key blob associated with the new | | |
| migratable storage key; | | | |
| | loading a copy of the key blob created with the non-migratable storage | | |

key; and decrypting the data.

17. The method as recited in claim 14, further comprising the steps of:
requesting migration of new migratable signing keys;
searching the database for the location of a key blob associated with a nonmigratable parent of the key to be migrated;
processing the migration.

1

- 18. In a data processing system, a method comprising the steps of:
 creating a migratable storage tree with a storage root key; and
 creating a non-migratable storage tree with the storage rootkey where the
 migratable storage tree and the non-migratable storage tree are identically structured
 with corresponding keys and authentication data.
- 19. The method as recited in claim 18, wherein the migratable storage tree and the non-migratable storage tree are created by a trusted computing module in accordance with Trusted Computing Platform Alliance.
- 20. The method as recited in claim 19, wherein the migratable storage tree comprises migratable keys and a user key, wherein the non-migratable storage tree comprises non-migratable keys and a user key.
- 21. The method recited in claim 18, wherein the migratable storage tree comprises migratable keys and encrypted user data wherein the non-migratable storage tree comprises non-migratable keys and encrypted user data.
- 22. The method as recited in claim 18, wherein the non-migratable storage tree will include non-migratable storage keys corresponding to each migratable storage key in the migratable storage tree.

- The method as recited in claim 18, wherein the non-migratable storage tree will include non-migratable storage keys corresponding to a subset of the migratable storage keys in the migratable storage tree.
 - 24. The method as recited in claim 18, wherein use authorization in the non-migratable storage tree will be identical to use authorization in the migratable storage tree.
 - 25. The method as recited in claim 18, wherein use authorization in the non-migratable storage tree can be deduced from user authorization in the migratable storage tree with additional data.
 - 26. The method as recited in claim 25, wherein the use authorization in the non-migratable storage tree is obtained by hashing the concatenation of the user authorization in the migratable storage tree with a fixed string.
